

Case studies

Name	Type	Water-related hazards
① Alpine regions	Small catchments	Floods & Landslides
② Danube	Trans-boundary large river	Large-scale inundations
③ Barcelonette	Mountainous catchment	Landslides & debris flows
④ Carlisle	Urban area	Urban floods
⑤ Soča-Isonzo	Trans-boundary catchment	Floods & landslides
⑥ Somerset	Coastal area	Storm surges

Partners

11 partners, 6 countries

KULTURisk

Knowledge-based approach
to develop a cULTURE of
Risk prevention

FP7-ENV.2010.1.3.2-1 | Project No 265280

Objective

To reduce human losses and economic damages caused by disasters around the globe, risk prevention still needs to be promoted.

In the European context, the KULTURisk project aims to assess and demonstrate the potential benefits of different risk prevention measures in the reduction of damages produced by water-related hazards, such as floods and landslides.

This demonstration will initiate a culture of risk prevention, which can then be extended to other types of natural hazards, such as earthquakes and forest fires.

KULTURisk is developing a culture of risk prevention and demonstrating its advantages over traditional post-disaster recovery

Approach
